

The Haberman Virus

A Genetically-Engineered Virus - A World under Threat! No one would bury him - no one had the energy - and his family, as well as the whole village, would be dead within four weeks. A mysterious visitor checks his handiwork in the village clad in a space suit. He makes a phone call. The field trial has been successful. Implementation of phase two can commence. Sam Haberman, a naturalised American citizen, Israeli-born Jew is a pre-eminent virologist and geneticist. He is seen as moderate and charismatic, a successful ladies man, acclaimed by his peers, but he shields a secret. He realises the virus he has genetically engineered, on the orders of the American President, had given him the means to redress the imbalance of the occupier and the occupied in Palestine. Millions are doomed to die in the madness. Only Steve Case and his team can stop Haberman as he moves across three continents. Only one person who can get close enough to kill him - the woman who loved him.
